# Foreword

This report and associated 1:5 000-scale maps specifically relate to the development areas on north Lantau Island and Ma Wan on which new road and rail links associated with the construction of the new airport at Chek Lap Kok and new port facilities at north Lantau Island are being developed. The report covers part of the site of the proposed Port Peninsula Development, the North Lantau Expressway and Lantau Fixed Crossing in the most northeasterly part of north Lantau Island.

The report forms part of the published results of a programme of systematic geological mapping of Hong Kong that began in 1982 and complements geological information contained in Hong Kong Geological Survey Memoir No.6 - Geology of the Lantau District. This work has greatly enhanced our understanding of the stratigraphy, structure, and geological history of Hong Kong's rocks. At the same time, it has allowed a geological database, necessary for the continuing economic development of the Territory, to be established and developed.

The mapping programme is being undertaken by the Hong Kong Geological Survey, which is a section of the Planning Division of the Geotechnical Engineering Office. The section was led by Dr I. R. Basham and Dr C. J. N. Fletcher and the Division was under the direction of Dr R. P. Martin during the mapping project reported here.

The 1:5 000-scale onshore geological survey of north Lantau Island and Ma Wan was conducted by Dr R. J. Sewell, and the offshore geological data were compiled and interpreted by Mr J. W. C. James. Much helpful advice and review comments were given by Dr S. D. G. Campbell, Mr P. A. Kirk, and Mr J. A. Fyfe.

The Survey benefitted from the co-operation of many organizations and individuals. In particular, the co-operation of Mott MacDonald (Hong Kong) Ltd, Scott Wilson Kirkpatrick & Partners, the Provisional Airport Authority, and Electronic and Geophysical Services Ltd is gratefully acknowledged.

This report and the accompanying map sheets will be of interest and value to earth scientists, engineers, planners, developers, teachers and students.

## List of Tables

### Table

	Grain Size Description and Classification of Rocks and Superficial Deposits in Hong Kong	9
	Summary of the Onshore and Offshore Stratigraphy of the District	17
3	Whole-rock Major- and Trace-element Geochemistry for Representative Rock Types in North Lantau Island and Ma Wan. Major oxides in wt%, trace elements in ppm.	23

## List of Figures

### Figure

1	Location Map of Major Infrastructure Developments Undertaken and Proposed for North Lantau Island and Ma Wan	10
2	Traverses Undertaken during 1968, 1988-89 and 1992-93 Field Surveys	12
3	Locations of Boreholes Drilled for North Lantau Island and Ma Wan Infrastructure Developments	13
4	Locations of Seismic Lines around North Lantau Island and Ma Wan	15
5	Simplified Onshore Solid Geology of the District	18
6	Simplified Seabed Sediment Map of the District	19
7	Generalized Classification and Nomenclature of Selected Major and Minor Intrusive Rocks (after Le Maitre, 1989)	24
8	Principal Structural Features of the District	33
9	Contoured Pole Plot of Joints Measured for All Major Rock Types on North Lantau Island and Ma Wan	34

10	Schematic Section Showing the Relationship between Superficial Deposits and the Different Environments of Deposition	35
11	Distribution and Isopachs in Metres of the Hang Hau Formation	

## List of Plates

### Plate

	Andalusite Crystals in Sandstone of the Lok Ma Chau Formation Exposed on Tsz Kan Chau (15880 20849)	20
2	Massive Coarse-ash Crystal Tuff of the Yim Tin Tsai Formation Exposed on Tang Lung Chau (24590 22340)	21
3	Thin Section of Lapilli-bearing Coarse-ash Crystal Tuff of the Yim Tin Tsai Formation from North Lantau Island (23190 22830); XPL	22
4	Thin Section of Porphyritic Fine-grained Granodiorite from a Borehole West of Ma Wan (24395 23831); XPL	25
5	Megacrystic Lantau Granite Exposed at Sz Pak Wan (21900 19070)	26
6	Thin Section of Ma Wan Granite from a Borehole at Ma Wan (24503 23045); XPL	26
7	Alkali Feldspar Megacrysts in Rhyodacite Porphyry from Wo Sheung Au (17390 15670)	27
8	Sheet Jointing in Porphyritic Microgranite Exposed on the Southwestern Slopes of Lo Fu Tau (17000 17645)	28
9	Contact between Rhyolite Porphyry and Porphyritic Microgranite Showing Development of an Aphanitic Chilled Margin in the Younger Dyke (17925 20150)	29
10	Composite Dyke Exposed on Ma Wan Showing Injection of Felsic Magma into partly-cooled Mafic Magma (24685 22865)	29
11	Basalt Dyke Cutting Feldsparphyric Rhyolite at Sz Pak Tsui (21435 19015)	30
12	Thin Section of Strongly Chloritized Biotite and Sericitized Plagioclase Phenocrysts in a Hydrothermally Altered Feldsparphyric Rhyolite Dyke from Ngau Tau Wan (16790 18625); PPL	31
13	Subhorizontal Sheet Joint Developed in Coarse-ash Crystal Tuff of the Yim Tin Tsai Formation on the Southeastern Coast of Ma Wan (24670 22925)	34
14	Terraced Paddy Fields Formed on a Large Debris Flow Deposit at Ngau Kwu Long (15850 16750)	36
15	Discovery Bay Golf Course Formed in a Topographic Low of Weathered Lantau Granite between Resistant Ridges of Feldsparphyric Rhyolite Dykes (17230 16140)	40
16	Large Quartz Vein Exposed North of Penny's Bay from Which Quartz Has Been Quarried (22475 21325)	41

## Map and Report Series Notes

- This report describes the geology of north Lantau Island and Ma Wan and should be read in conjunction with the 1:5 000 Geological Maps 10-NE-A, 10-NE-C, 10-NW-B, 10-NW-C, 10-NW-D, and 10-SW-A. The 1:20 000 Geological Map Sheet 10 (Silver Mine Bay) and Memoir 6, Geology of the Lantau District, also include relevant information on the geology of the area.
- This report forms one of a series that records the findings of the Hong Kong Geological Survey. An index of the 1:5 000 Geological Maps to which this report relates is shown below. The report specifically relates to the area covered by the North Lantau Expressway, the Lantau Fixed Crossing, and part of the Port Peninsula Development.

*1:20 000 Maps*

*1:5 000 Maps*

- Onshore superficial deposits are not generally considered mappable if less than 2 m thick. This minimum thickness is also used as a mapping criterion for offshore sediments.
- Grid references are based on the Hong Kong 1980 Metric Grid as shown on the 1:5 000 Geological Maps. Ten-figure references indicate positions to the nearest 10 m, with Eastings followed by Northings, eg 2200 2230. Eight-figure references indicate positions to the nearest 100 m.
- All onshore and offshore levels and depths are reduced to Hong Kong Principal Datum (PD), which is 1.2 m below Mean Sea Level and 0.15 m above Admiralty Chart Datum.
- Samples in the Territory-wide rock collection archived by the Hong Kong Geological Survey are prefixed HK followed by the serial number, eg HK 9872.
- Boreholes are generally referred to by the drilling contractor's number followed by the Geotechnical Information Unit (GIU) accession number for the relevant ground investigation report, eg 5SW32/13464. The GIU is located in the Civil Engineering Library of the Civil Engineering Department and is maintained by the Geotechnical Engineering Office.
- Copies of seismic profiles used in this project are held by the Hong Kong Geological Survey. Seismic projects are numbered sequentially by year and include several lines which carry a one- or two-letter prefix and are numbered sequentially. For example, line NL5 of project 91/1 refers to line no. 5 of the North Lantau survey, being the 1st 1991 project for which data has been acquired by the Hong Kong Geological Survey.
- The system used in this report for grain size description and classification is summarized in Table

Table 1 - Grain Size Description and Classification of Rocks and Superficial Deposits in Hong Kong

Superficial Deposits		Grain Size mm	Solid Rocks											
			Sedimentary Rocks		Pyroclastic Rocks		Acid			Igneous Rocks			Metamorphic Rocks	
Boulders		200	Sedimentary Breccia, Conglomerate		Pyroclastic Breccia, Agglomerate		Granite			Quartz Syenite			Schist	
	Cobbles	60	Sedimentary Breccia, Conglomerate		Very Coarse		Pegmatite			Gabbro			Schist	
		20	Sedimentary Breccia, Conglomerate		Coarse		Granite			Quartz Monzonite			Schist	
Gravel	Medium	6	Sedimentary Breccia, Conglomerate		Lapilli-Tuff		Granite			Syenite			Schist	
	Fine	2	Sedimentary Breccia, Conglomerate		Lapilli-Tuff		Granite			Syenite			Schist	
		0.6	Sedimentary Breccia, Conglomerate		Lapilli-Tuff		Granite			Syenite			Schist	
Sand	Coarse	0.6	Sandstone		Coarse Ash Tuff		Granite			Gabbro			Schist	
	Medium	0.2	Sandstone		Coarse Ash Tuff		Granite			Gabbro			Schist	
		0.2	Sandstone		Coarse Ash Tuff		Granite			Gabbro			Schist	
Mud	Silt	0.06	Siltstone	Mudstone	Fine Ash Tuff	Very Fine, Aphanitic	Aplite, Micro-Microgranite granodiorite			Microgabbro			Lamprophyre	Mylonite, Phyllite
			Claystone	Mudstone			Fine Ash Tuff	Rhyolite Dacite Rhyodacite			Andesite			
	0.002	Claystone			Fine Ash Tuff			Rhyolite Dacite Rhyodacite			Basalt			Mylonite, Phyllite
